

Download Flyps Update – Instructions

Please note that this is only an update of Flyps. A previous version of the Flyps 3 program must be installed on the computer.

To ensure that you are downloading the corresponding update to your installed Flyps, you are asked to state the Master id of your version. This you can find either on the Flyps CD or in the About box, when running the program. Please see below.

Flyps3.1

If there is no corresponding download available, please contact your nearest Flygt representative for information regarding, if and when there will be one.

After filling in the registration chart, click next to go to the actual download site.

Download the executable file(s) and save it(them) on your local hard drive (remember where....). From the Start menu select Run and open the flyps_XXXXXX executable file just downloaded. This will start the update of the Flyps program and product data. Repeat the procedure with the dimdraw executable file, if downloaded.

Note: To ensure a fully functioning Flyps update, it's essential that You download both the flyps_XXXX and dimdraw executable files and run the updates in the order mentioned above, i.e. flyps_XXX.exe before dimdraw.exe
